Headline

A specialised knitwear factory, built for long relationships.

Copy

Madalena Beça Knitwear has developed and produced flat knitwear since 1998. We are a family company, producing in our own facilities in Penafiel, Portugal.

We are neither an impersonal industrial operation nor an inaccessible luxury house. We are an independent, specialised manufacturer where clients work directly with the teams developing, planning and producing their knitwear.

Development, production and quality control sit within one factory structure. That means one accountable partner for the garment, a closer connection between what is developed and what is made, and a direct line to the people making it.

It also means our judgement works in two directions. Yarn, gauge and construction reach into price, availability, certification and timing, and a sample deadline is usually connected to a campaign, a showroom or a launch. Our role is to understand those connections, explain the available routes and help you make an informed decision.

We work best with brands that intend to stay. Knowledge accumulates across collections, how a yarn behaved, why a measurement was adjusted, which construction held in production, and the relationship becomes more informed each season.

Headline

The same family, since 1998.

Copy

The company was founded in 1998 and has been built by the same family since. The next generation now works alongside the first, in the same facilities where the company began.

Continuity is not only a matter of history. It is why technical knowledge stays inside the factory rather than leaving with a supplier contact, and why a client returning for a third or fourth season is met by people who already know how their product behaves. For the accounts we work with most closely, that continuity includes regular meetings and review after production.

From programming and knitting to garment assembly, quality control and packing — produced in our own facilities in Penafiel, Portugal.

Página HOW WE WORK

Bloco 1: manter tudo igual

Bloco 2: Headline (§11)

Made in our own facilities.

Copy

From programming and knitting to garment assembly, quality control and packing — produced in our own facilities in Penafiel, Portugal.

Each style is programmed in STOLL M1plus for the gauge and construction it requires. Our flat machines cover gauges 3, 5, 7, 10 and 12, which allows a brand to move between heavy constructions and fine-gauge product without changing manufacturer.

Development, production and quality control sit within one factory structure. Checkpoints are placed across the process — yarn and colour behaviour,

measurements after washing, workmanship at linking and assembly, and conformity before packing — so that a deviation is identified while it can still be corrected, rather than at final inspection.

Producing in Europe, in our own facilities, means the partner you brief is the partner who makes the garment.

Qualificação, corpo pequeno, no fim do bloco (§7)

Specialised services such as embroidery, printing or garment-dye processes may be carried out by selected external partners.

Subheadline

What time in one place produces.

Copy

Madalena Beça Knitwear has developed and produced flat knitwear since 1998, in the same place, as a family company.

What a factory inherits is not equipment. It is a body of knowledge that only accumulates by staying: how a particular yarn behaves after washing, which measurements need adjusting before they reach the knitting program, where a construction tends to fail at linking, which gauge holds a shape and which one drops it.

That knowledge sits with the people who develop and make the product, and it is applied to a client's first sample rather than discovered on the fourth. It is also what allows a technical concern to be raised early — the most useful thing a factory can offer, and the difference between a prototype that teaches you something and a prototype that costs you a season.

The same continuity applies to a relationship. Knowledge accumulates across collections: the longer we work with a brand, the more informed the judgement becomes, and the fewer decisions have to be made twice.

STUDIO DESIGN

Título de página (§13): Studio Design — Client-Specific Knitwear Development

Objetivo (§10): explicar apoio criativo e técnico à medida.

Mensagem primária (§10): *client-specific development, not generic white-label collections.*

CTA (§10): Brief Studio Design · **Tema SEO:** knitwear design development

Bloco 1 Headline

Creativity connected to manufacturability.

Copy

Most factories are asked to execute a style. We are asked to help decide what the style should be.

Studio Design is where a reference, a sketch or an idea becomes a knitwear product that can be made — in the right yarn, at the right gauge, at a price the collection can carry and within the season it belongs to. It sits before production rather than beside it, and it exists because the decisions taken at that stage determine almost everything that follows.

Clients arrive at different points. Some send a complete tech pack. Others send a photograph, a yarn and a measurement. Both are workable; they simply begin at a different place in the same process. Where a client wants it, the studio can contribute to a specific collection.

What we bring is judgement, not authorship. We ask who the product is for, what it needs to retail at, where it sits in the collection, how many colours and sizes it carries and whether the style is meant to return next season — because those answers change the technical route. A style built for one drop is not developed the same way as a style intended to be replenished.

Corpo pequeno, no fim do bloco (§13 — obrigatório)

Studio Design is client-specific work. It does not offer a seasonal collection for open selection, it does not replace the client's creative direction, and not every client needs it.

Bloco 2 — Fio, desenvolvimento e técnica

Headline

The yarn decides more than the handfeel.

Copy

Yarn determines weight, price, availability, certification eligibility and how a garment behaves after washing. We research and compare routes against your target price, your colour and quantity structure and your delivery window — including stock-service qualities, minimums per colour and the surcharges that apply to small lots.

From there the work is technical. Each style is programmed for the gauge and construction it requires. We develop stitch structures and swatches, translate measurement charts into knitting programs, and check fit and behaviour on a finished garment, after washing rather than before.

When a measurement, yarn, gauge or construction appears unlikely to produce the intended result, we raise it before proceeding, explain why and propose alternatives for approval. The objective is to avoid foreseeable prototypes, delays and costs — not to redesign your product. Comments are tracked, adjustments are documented, and the version that enters production is the version you approved.

PÁGINA DE SUSTENTABILIDADE

Bloco 1: Missão

Headline

Our certifications are not badges. They are documented proof of how we choose to produce.

Copy

In 2017 the company restructured, and certification was the instrument. It required the professionalisation of processes, the documentation of the supply chain and investment in a more traceable way of producing. At a moment when

European manufacturing was under pressure from low-cost production, certification allowed us to state clearly — and evidence — what producing in Europe means: traceability, audited processes, social compliance and environmental responsibility.

We did not adopt new values. We used certification to structure and verify the ones the company already held. GOTS came first, in 2017, with in-person auditing every year since. GRS and RWS followed in 2022, and OCS completes the current scope.

Madalena Beça Knitwear is certified to GOTS, GRS, RWS and OCS standards and works with certified supply-chain partners. Certified production is developed according to the selected materials, project scope and required transaction documentation.

Sub-lista — What this means for your brand (§16)

- Fibre eligibility established before development begins, not after
- Traceability you can document rather than describe
- Transaction documentation to support your own claims
- Audited processes, verified annually
- Production aligned with the requirements of the European premium market

Blocos 2 a 5 — Uma certificação por bloco

Template idêntico nos quatro.

Bloco 2 — GOTS · Global Organic Textile Standard

Certified since 2017.

What it covers. Textiles made from certified organic natural fibres, with environmental and social criteria applied across processing and manufacturing.

What it requires of us. Annual in-person auditing, separation of certified production, and documented traceability from certified input through to the finished garment.

What it gives your brand. A substantiated organic claim, supported by transaction documentation.

Condition. Applies when the selected yarn is certified and the project includes the required documentation.

Bloco 3 — GRS · Global Recycled Standard

Certified since 2022.

What it covers. Verified recycled content, with chain-of-custody, social, environmental and chemical criteria.

What it requires of us. Audited handling of recycled inputs and documented

custody through each production stage.

What it gives your brand. A verified recycled-content claim rather than a stated one.

Condition. Applies when the yarn route and documentation support it.

Bloco 4 — RWS · Responsible Wool Standard

Certified since 2022.

What it covers. Wool from farms audited for animal welfare and land management, tracked through the supply chain.

What it requires of us. Certified sourcing and documented custody of the fibre through to the finished garment.

What it gives your brand. A wool claim with verified provenance behind it.

Condition. Applies when the selected wool quality is certified and documentation is in place.

Bloco 5 — OCS · Organic Content Standard

What it covers. Verification of organic fibre content and its chain of custody.

What it requires of us. Documented input and custody, verified by audit.

What it gives your brand. A verified content claim where the full GOTS processing criteria are not required.

Condition. Applies according to project scope and documentation.
